

Matthew Quinn, owner and flight director for Great Lakes Drone Company has made several major breakthroughs in the drone industry in the past few years. His career has been focused on driving technology and innovation across a variety of commercial and public sector applications. He also provides regulatory consulting for DroneLaw.Pro and several other public and private UAS operations.

For the past 5 years his primary focus has been unmanned aerial system integration into the commercial market. These accomplishments include one of the first ten FAA commercial night waivers, the 3rd Multiple Unmanned Waiver by the FAA and one of only 3 companies in the US with Drone Light Show capabilities. He holds several authorizations within the US, Canada, Sri Lanka, and Morocco markets for UAS operations on multiple platforms. These operations include aerial cinematography, aerial and underwater search and rescue, SWARM technology with drone light shows and aerial crop spraying with agricultural data management. Working with companies like SeaWorld, EAA, AOPA, Universal Studios, the Sri Lanka Navy and Haileys Group internationally along with several major municipalities within the US.

Great Lakes Drone Company has become one of the foremost industry leaders in UAS services and proof of concept aerial UAS operations. Providing STEM education and awareness is key to the future of the aviation industry. In partnership with Sundance Media Group (SMG) he has expanded our educational services to Part 141 compliant UAS education. Our recent partnership with Fortem Technologies has also secured further technology, knowledge and demonstration capabilities of anti-UAS program management. "In UAS operations, it is not what we can't do, it's more about what we haven't tried yet."
